Daniel Legan

Software Developer | Minneapolis, MN | 952-693-3325 | legan14daniel@gmail.com | github.com/Daniel-Legan

Dear Fixaris Games,

Ahhh! Have you ever realized that your inner yelling voice is just as loud as your inner whisper voice? No? These are one of many shower thoughts I occasionally have. I also think a lot about applications too. As a software developer, I have the "defensive coding" mindset - always thinking of ways my programs could be vulnerable to potential faults and breakdowns. As such, I ensure the programs are logically concise, organized, and that each line serves a meaningful purpose – and not a liability in the future.

I am always looking at how things tick. For example, I have recently taken an interest in what technology goes into building bicycles. How different material properties affect ride characteristics or about how a rider's position affects aerodynamics efficiency. When talking about software, I enjoy examining the flow of data throughout a program. How functions can be minimized and made more rational. How a code can be made more elegant. When I am excited about a project, my personality drives me to always be curious and to place extra attention to the most minute aspects of it.

Today you can find me continually pursuing my passion of software development. While attending Prime Digital Academy, an immersive program designed to present modern technologies through a wholistic approach, including working with real-world clients, I have gained technical skills to create applications as well as interpersonal skills to build cohesive teams. Prior to Prime, I worked extensively as a Medical Technologist. In that position, I shared many of the same skills: analytical thinking, problem solving, and communication. Given my extensive work experience outside of software development, not only do I provide a unique perspective but also evidence of proven work ethics.

From building computers, geeking about bikes and debugging programs, I enjoy digging into the technical aspect of mechanical and software applications alike. Additionally, as an avid gamer, I am the perfect candidate for this job. I am willing to immediately relocate to your office's headquarters upon start of employment with or without *relocation assistance*. Check out my GitHub to view my progress. I am available Monday – Friday, 10:00 AM – 5:00 PM CST to discuss our shower thoughts and/or talk about why I am a good fit for your team.

Sincerely,

Daniel Legan
